Custom Feed Formulations

*Let us customize
a feed for your
unique needs.*

Quality Feeds Begin at Brown's

Quality feed starts with the right ingredients for your needs. FM Brown's uses fresh ingredients to produce each batch of feed. By using a nutrient profile for each ingredient, we can formulate your feed for maximum production or efficiency at the lowest cost.

Our feeds can be manufactured as either a meal, coarse-texture feed, pellet or crumble depending on your animal and facility needs. Your feed supplement can be designed to fit your farm-raised grains and forages so you buy only the ingredients and nutrition you need.

With a 2 ton minimum order, feeds can be customized with any additives your herd or flock needs to improve health, production or efficiency. Minerals and vitamins can be added at the precise levels recommended for maximum utilization and cost-effectiveness.

Feed Ingredients

These ingredients are typically used in formulating FM Brown's feeds:

Alfalfa Meal and Pellets
Barley
Beet Pulp
Cooked and Flaked Soybeans
Corn
Delinted Cottonseed
Distiller's Grains
Extruded Soybean Meal
Fat
Fish Meal+
Heat Treated Soybean Meal
Minerals and Vitamins
Molasses
Oats
Roasted Soybeans
Soy Hulls
Soy Oil
Soybean Meal
Wheat Midds
60% Pork & Poultry Meal

Your feed supplement can be designed to fit your farm-raised grains and forages so you buy only the ingredients and nutrition you need.
