

Brown's Game Bird And Turkey Feeding Programs

F. M. Brown's Sons, Inc. has been manufacturing feeds for Game Birds for many years, and is a recognized leader in feeds for the Game Bird industry in PA and NJ. Customers can buy our standard Game Bird feeds in either bags or in bulk, or they may choose to use our High Performance or "All Natural" lines of Turkey feeds. In addition to the following feeds, Brown's can custom design a specific feed or modify our current lineup of feeds to meet most customer requests. Alternate medications can also be added to orders of two tons or more to combat specific disease problems.

BROWN'S GAME BIRD AND TURKEY FEEDS

26% TURKEY STARTER A CRUMBLES – A 26% crude protein starter crumble containing Amprol. This feed contains the amino acid and energy profile starting poults need. In addition, Diamond V XP yeast culture has been added to improve palatability and reduce starve out problems.

21% TURKEY GROWER NT PELLETS – a 21% crude protein feed that contains high levels of Lysine and Methionine to speed growth and maintain bird health. The addition of Oxytetracycline and Neomycin help protect against enteritis and respiratory problems common in birds of this age which must endure a wide range of environments.

15% GAME BIRD AND WILD TURKEY FLIGHT DEVELOPER PELLETS – a 15% crude protein grower/finisher feed which provides a balanced diet for good feather growth and continued muscle development in semi-mature birds. Developing strong flight characteristics is critical to the success of top game bird farms.

18% GAME BIRD AND WILD TURKEY BREEDER PELLETS – An 18% protein, 4% fat general purpose breeder feed which is high in calcium, contains added fat, and XP yeast culture for persistent production of fertile eggs with strong shells. Game Bird Breeder is an ideal feed when there are several different types of birds at different stages of lay all receiving the same type of feed.

13% POULTRY MAINTENANCE PELLETS – (minimum order – 2 ton) – A 13% crude protein, medium energy, maintenance level feed for holding breeding birds till laying season. This is also an excellent feed for show birds and mature non-laying poultry of all species.

BROWN'S HIGH PERFORMANCE TURKEY FEEDS

Available In Bulk or Sacked – Minimum Order (2 Ton)

BROWN'S TURKEY PRE-CHARGER R CRUMBLES – A 29% starter crumble containing Rofenaïd that is high in energy (5% fat) and very palatable. It is designed for the first two weeks of life, and is effective against many problems associated with poults. Generally starting losses on this feed with average management have been under 2%, and feed intake is excellent.

BROWN'S TURKEY PRE-CHARGER A CRUMBLES – The same feed as above except that it contains Amprol to counter coccidiosis problems.

BROWN'S TURKEY CHARGER A CRUMBLES/PELLETS – A 26% grower to feed from 5 to 8 weeks of age which is high in energy and fortified with additional Lysine and Methionine for rapid growth. Amprol is the standard medication, but other medications can be added for specific diseases.

BROWN'S TURKEY GROWER PELLETS – A 22% grower feed designed to meet the demands of rapidly growing birds as they develop their skeletal structure. Added fat and high levels of Methionine and Lysine provide for rapid economical growth. Turkeys are generally on grower 9 to 12 weeks, but many growers use this feed longer where a limited number of bins are available. Medication can be adjusted to meet on farm disease challenges.

BROWN'S TURKEY DEVELOPER I – CTC PELLETS – An 18% pellet designed to begin the finishing process. Developer feeds are normally fortified with 100 grams of Chlortetracycline which requires no withdrawal prior to slaughter. Turkeys are generally on this feed from 13 to 17 weeks.

BROWN'S TURKEY DEVELOPER II – CTC PELLETS – A 16% pellet designed for development of maximum meat production with an acceptable market finish. This feed can be fed from 18 weeks to market without excessive fat deposition. If additional finish is desired, put birds on finisher at least 3 weeks before expected market date.

BROWN'S TURKEY FINISHER PELLETS – A 14% non-medicated pellet designed to put extra finish on birds prior to slaughter. This feed has a high amount of corn and will add an even layer of fat under the skin without excessive fat buildup around body organs. This is an excellent finisher feed if a high dressing percentage is desired.

BROWN'S TURKEY PRE-BREEDER PELLETS – A highly fortified feed designed to be fed for 3 weeks before birds start to lay. This feed is high in calcium, phosphorus, and vitamins. It contains an energy level that will prepare the birds for maximum lay.

BROWN'S TURKEY BREEDER PRE-PEAK PELLETS – A 17% pellet high in energy and amino acids which is designed to lead birds up to maximum lay.

BROWN'S TURKEY BREEDER POST-PEAK PELLETS – As maximum egg lay drops, feed intake will continue to increase. This step down feed will reduce problems of laying birds becoming excessively fat, prolong egg laying persistency, and increase profitability of laying period.

Brown's Turkey Grower, Developer, and Finisher are also available in High Fat (min. 8% fat) or All Natural Formulas free of antibiotics and animal fats, but high in plant fats.
